

AMENDMENTS TO THE ABSTRACT

An electronic circuit provided with a piezoelectric transformer (100) for driving an electronic component (19). The transformer (100) is integrated in the circuit, a first layer (2) of the circuit having a first primary piezoelectric plate (4) integrated therein, a second layer (5) having a secondary piezoelectric plate (8) integrated therein and connected to the electronic component (19), and an intermediate layer (6) comprising an insulating material is interposed between the primary and secondary plates (4 and 8).
